Amr Yasser

SOC Analyst (Tier 1)

Cairo, Egypt | +20 115 556 3245 | amry02077@gmail.com | linkedin.com/in/bn-yasser-424bb4215 | ammaryasser28.github.io

SUMMARY

SOC Analyst (Tier 1 / L1) candidate with a Computer Science degree and a SOC-specialized Cybersecurity Diploma. Hands-on in security monitoring, alert triage, log analysis and incident investigation with Splunk SIEM, Wireshark, and Windows Security Event Logs. Builds detection and response labs mapped to MITRE ATT&CK, publishes Blue Team Notes, a free SOC learning platform, and administers Active Directory daily in an enterprise environment.

EXPERIENCE

Cybersecurity Mentor (Part-time) | Route Academy — Jul 2026 – Present

- Mentor Cybersecurity Diploma students (SOC track) and run weekly hands-on workshops covering the Introduction to Cybersecurity and Cybersecurity Essentials courses.
- Design hands-on SOC labs end to end (attack, detect, mitigate): lab environment, step-by-step tasks, explanation material, and graded assignments.
- Review and grade student incident reports, giving feedback on evidence, indicators of compromise, and recommended mitigations.

IT Support Specialist | NG University — Oct 2025 – Present

- Administer Active Directory user accounts, security groups, permissions, and password resets, following access control and least-privilege practices.
- Triage, document, and resolve user incidents and service requests through Zoho ServiceDesk Plus, escalating when needed.
- Configure Cisco switches (VLANs, Port Security) and manage endpoints with ManageEngine Desktop Central and ADManager Plus.

Coding Instructor (Part-time) | iSchool — May 2026 – Jul 2026

PROJECTS

SOC Detection & Response Lab Series | Home Lab — 2026

- Built a home SOC lab on VMware (Kali Linux, Ubuntu, Windows 11) with isolated host-only networking, plus Cisco Packet Tracer; every lab follows an Attack, Detect, Mitigate workflow and ends with an incident report mapped to MITRE ATT&CK.
- **Windows Security Monitoring:** investigated suspicious account creation and privileged group changes through Security Event IDs 4720, 4732, and 4726, and enforced least privilege with NTFS permissions verified via icacls.
- **Man-in-the-Middle Attacks:** simulated ARP spoofing (arpspoof) and DHCP starvation / rogue DHCP (Yersinia), detected spoofed ARP replies and DHCP floods in Wireshark, mitigated with Dynamic ARP Inspection and DHCP Snooping (T1557.002, T1557.003).
- **PCAP Investigation:** analyzed a MAC flooding capture to identify CAM table overflow indicators, contained the attack with switch Port Security, and documented the incident.
- **Network Traffic Analysis:** baselined ARP, ICMP, DHCP, DNS, HTTP, and TCP traffic with Wireshark display filters, and exposed cleartext credentials in HTTP versus HTTPS.

Blue Team Notes – Cybersecurity Learning Platform | Personal Project — 2026

- Built and published a free learning platform for aspiring SOC analysts: 158 study notes across four courses (Pre-Security to SANS SEC450), 658 interactive diagrams, section-level search, and a full English version of every note.
- Automated publishing with GitHub Actions: every push to a course repository rebuilds the search index and renders its diagrams, so new notes go live with no manual steps.

TECHNICAL SKILLS

- **Security Operations:** SIEM (Splunk), Security Monitoring, Alert Triage, False-Positive Analysis, Log Analysis, Incident Response, Incident Reporting, IOC Analysis, Threat Hunting, Threat Intelligence, Phishing & Email Analysis, SOAR & Automation, Basic Malware Analysis, Vulnerability Assessment
- **Frameworks:** MITRE ATT&CK, Cyber Kill Chain, Pyramid of Pain, NIST Cybersecurity Framework, Zero Trust
- **Network Security:** Wireshark, TCP/IP, OSI Model, ARP/DHCP/DNS/HTTP Analysis, IDS/IPS, Firewalls (FortiGate), VLANs, Port Security, DHCP Snooping, Dynamic ARP Inspection
- **Windows & Identity:** Active Directory, Kerberos & NTLM, Windows Security Event Logs, Sysmon, PowerShell Logging, EDR Concepts, NTFS Permissions, Windows Hardening
- **Systems & Tools:** Linux (Ubuntu, Kali), Bash, Yersinia, arpspoof, Python (Basic Scripting), Git, GitHub Actions, VMware, Cisco IOS, Cisco Packet Tracer

EDUCATION & TRAINING

Cybersecurity Diploma, SOC Specialization | Route Academy — Dec 2025 – Jul 2026

- Modules: Introduction to Cybersecurity, Cybersecurity Essentials, Cybersecurity Attacks, and Incident Response (SIEM, threat hunting, incident handling).

B.Sc. Computer Science | Thebes Academy, Higher Institute for Computer Sciences — Sep 2020 – May 2024

COURSES

- **Security:** SANS SEC450 (Blue Team Fundamentals), CompTIA Security+ (Course), Fortinet FortiGate Firewall
- **Networking & Systems:** Cisco CCNA Routing & Switching, CompTIA Network+ (Course), CompTIA A+ (Course), Linux Admin I
- **TryHackMe:** SOC Level 1, Cyber Security 101, Pre Security

ADDITIONAL INFORMATION

- **Languages:** Arabic (Native), English (Intermediate) | **Military Service:** Completed
- **Soft Skills:** Communication, Teamwork, Problem-Solving, Time Management, Technical Training, Technical Writing
